

HOW TO RUN A RIGHT ERP ANALYSIS?

PROCESS OF CRM/ERP ANALYSIS

Purchasing a new ERP/CRM system is a huge step for your company and this decision could take you to the next level of your business. On the way to a right decision, we are here to help you though.

- **Know better your company**

Data collection and information during online/personal workshops based on a schedule. Defining critical processes, requirements, and expectations.

- **Analysis**

Based on your expectation we will do analyze of potential vendors and prepare for you a documentation which contains all relevant information about selected vendor included functionality & project management, pro and cons of the solution, next steps, and our recommendation.

Key Areas of analysis of ERP Solution is functionality and project management

Functionality of the new ERP is key element by purchasing ERP system. It depends on your industry, size, future development, and requirements.

In our analysis are included following areas:

- Platform flexibility
- Useability
- Data Migration
- Update and Maintenance

Project management section is covering all topics and questions which you should be asked a potential ERP vendor in the process of purchasing:

- Time frame
- Subscription costs
- Project cost
- Reference
- Training

After your successful selection of ERP, you need to consider apart from all described areas also **Change Management** question. An organized approach to prepare, support, and help individuals, teams, and organizations in making organizational change which ERP is without any doubts.
